

Project Initialization and Planning Phase

Date	01/07/2026
Team ID	SWTID-2026-5714
Project Name	OptiCrop: Smart Agriculture Production Optimization Engine
Maximum Marks	3 Marks

Define Problem Statements (Customer Problem Statement Template):

Create a problem statement to understand your customer's point of view. The Customer Problem Statement template helps you focus on what matters to create experiences people will love. A well-articulated customer problem statement allows you and your team to find the ideal solution for your customers' challenges. Throughout the process, you'll also be able to empathize with your customers, which helps you better understand how they perceive your product or service.

Example:

Problem Statement (PS)	I am (Customer)	I'm trying to	But	Because	Which makes me feel
PS-1	A small-scale farmer with 2-3 acres of land	Select the most profitable crop for my soil	I don't know my soil's N, P, K values and weather suitability	Soil testing labs are far away and expensive	Helpless and worried about crop failure
PS-2	An agricultural advisor supporting multiple farmers	Compare soil and weather conditions across different fields	I have to manually cross-check each case against general farming knowledge	There is no quick, data-driven tool to validate my recommendations	Overwhelmed and unsure if my advice is optimal for every farmer
PS-3	A first-time user new to digital farming tools	Get a quick crop recommendation without technical expertise	I don't understand agricultural jargon or complex software	Most existing tools require logins, technical knowledge, or paid soil tests	Hesitant and unsure whether technology can actually help me
