Empathy Map

Create an empathy map to understand your customer/user from four perspectives — what they Say, Think, Do, and Feel — in relation to the problem your project addresses. This helps the team build a customer-centric solution.

Persona: Ramesh, small-scale farmer, Kurnool — grows crops on a 2-acre plot and relies on rainfall, neighbors, and guesswork to decide what to plant each season.

SAYS • "I hope I get a good crop this season." • "I don't have money to get my soil tested." • "My neighbor is planting cotton. should I do the same?" • "I don't know if the rains will come on time or not."	THINKS • "If I choose the wrong crop, I will be in debt." • "Will anyone from the government help me?" • "Who can tell me what will grow best in my land?" • "If I use too much fertilizer, will it spoil my soil?"
DOES • Asks other farmers and follows what they are planting. • Buys seeds based on old experience and guesswork. • Watches weather reports on TV but doesn't fully understand them.	FEELS • Scared and anxious about crop failure. • Stressed about financial loss and risk. • Helpless because of lack of scientific knowledge and reliable data.
